

MVP Specification — Student Dashboard

Objective

The Student Dashboard should be extremely simple.

This is an MVP.

The student is not managing data. The student is only accessing information that has already been prepared by the school.

The experience should be simple enough that a primary school student can understand it without training.

Login Page

Change Login Label

The login page currently displays:

Email

This is misleading.

Although Supabase internally requires an email address, our users do **not** log in using email.

The system automatically generates an internal email address only for authentication purposes.

This should remain completely hidden from users.

Required Change

Replace:

Email

with:

Username

The login form should therefore become:

- Username
- Password

The student should never know that an internal email exists.

The backend can continue using the generated email if required by Supabase, but the frontend must always present **Username**.

Student Dashboard

After login, the student lands on a simple dashboard.

There should be **no sidebar** in the MVP.

Header

Display:

- School Logo
- School Name
- Student Photograph
- Student Full Name
- Current Class

Example:

Remabim Infant Nursery & Primary School

Welcome,
John Peter

Class: Basic 4

Dashboard Actions

For the MVP, display only two action cards.

1. Check Results

This is the primary feature.

Display a large button:

 Check Results

2. Profile

Display:

 My Profile

Check Results

When the student clicks:

Check Results

Display two dropdowns.

Dropdown 1

Academic Session

Example:

2025/2026

The list should come from the School Admin's configured academic sessions.

Dropdown 2

Academic Term

This list must **not** display every configured term.

Instead, display **only terms for which this student has published results**.

Example

The school has configured:

- First Term
- Second Term
- Third Term

But only First Term and Second Term results have been published.

The dropdown should display only:

First Term

Second Term

Third Term should not appear until results have been prepared, approved, and published.

Do not display empty or unavailable terms.

View Result

After selecting:

- Session
- Term

The student clicks:

Check Result

Display a loading screen.

Example:

Preparing your report card...

This reassures the student that the report card is being generated.

Result Actions

After loading completes, display two buttons.

[View PDF](#)

and

Download PDF

View PDF

Opens the report card directly in the browser.

No download required.

Download PDF

Downloads the report card as a PDF.

On mobile devices, the browser should allow the student to choose where to save the file according to the device's normal download behaviour.

My Profile

The second dashboard option is:

My Profile

Allow the student to update basic personal information.

For the MVP:

Editable fields:

- Profile Picture
- Date of Birth
- Gender

Future fields will be added later.

The username should be visible but **not editable**.

Business Rules

The student cannot:

- Edit academic records.
- Edit report cards.
- Change class.
- View other students' results.

The student may only access their own information.

Security

A student should only see report cards that have been:

- Prepared by the Class Teacher.
- Approved by the School Admin.
- Published.

Unapproved or draft results must never appear.

Acceptance Criteria

The feature is complete when:

- The login page displays **Username** instead of **Email**.
- Internal Supabase-generated emails remain hidden from users.
- Students see a simple dashboard with no sidebar.
- The dashboard displays the school logo, school name, student name, class, and photograph.
- Students can access **Check Results** and **My Profile**.
- The Session dropdown loads from the School Admin configuration.
- The Term dropdown displays only terms with published results for that student.
- Clicking **Check Result** displays a loading indicator before the report card is available.
- Students can either **View PDF** in the browser or **Download PDF** to their device.
- Students can update their profile information.
- Students can access only their own records.
- Draft or unpublished report cards are never displayed.
