

Teacher Dashboard — Prepare Report Card (MVP Specification)

Objective

Add a new sidebar menu called:

 **Prepare Report Card**

This module is **separate from Student Marks**.

Its purpose is to allow the **Class Teacher** to prepare the final report card after all subject teachers have completed their score entry.

The Class Teacher should **not** re-enter subject marks here. This module is for reviewing academic data, completing non-academic information, previewing report cards, and submitting them for approval.

Design Principle

The workflow should follow the natural sequence used in schools:

1. Subject Teachers enter subject marks.
2. Class Teacher prepares report cards.
3. School Admin reviews.
4. School Admin approves.
5. Results are published.

Every stage has its own responsibility.

Sidebar

Teacher Dashboard

- Dashboard
 - Students
 - Student Marks
 - **Prepare Report Card**
-

Step 1 — Select Class

Display only the classes where the logged-in teacher is the assigned **Class Teacher (Form Teacher)**.

Example:

Basic 1
Basic 2
Primary 4

If the teacher is not a Class Teacher, this module should not be accessible.

Step 2 — Automatically Resolve Academic Context

The system should automatically determine:

- Active Academic Session
- Active Academic Term

Never default to an old term.

These values should come from the School Admin configuration.

Step 3 — Load Students

After selecting a class:

Display students alphabetically.

Include:

| S/N | Student Name | Admission Number |

Also display:

Total Students: 23

This allows the teacher to immediately verify that every student is present before preparing report cards.

Step 4 — Academic Summary (Read-Only)

Automatically retrieve every subject score already entered by Subject Teachers.

The Class Teacher must **not** edit subject marks here.

Display:

- Subject Scores
- Subject Grades
- Total
- Average
- Position (when available)

If a subject has not yet been completed, clearly indicate:

Pending Subject Teacher

or

Not Yet Submitted

The Class Teacher immediately knows which subject is preventing report card completion.

Step 5 — Attendance

The Class Teacher enters:

- Days School Opened
- Days Present

The system automatically calculates:

- Days Absent

Validation:

Days Present $\leq$ Days Opened

The teacher cannot save invalid attendance values.

Step 6 — Psychomotor & Affective Assessment

Load the school's configured traits dynamically.

Do not hardcode them.

Example:

- Punctuality
- Neatness
- Honesty
- Leadership
- Participation

The available traits should always come from the School Admin configuration.

Step 7 — Teacher's Remark

Provide a large text area.

If the school enables automatic remarks:

Generate a suggested remark using:

- Student Average
- Grade
- Attendance
- Behaviour

The teacher can edit the generated remark before saving.

Step 8 — Save Progress

Support both:

- Automatic background save
- Manual Save button

Only modified records should be saved.

Step 9 — Report Card Preview

Teacher clicks:

Preview Report Card

Generate the report card using the school's selected template.

Display:

- School Logo
- School Name
- Student Photograph
- Student Information
- Subject Scores
- Grades
- Total

- Average
- Position
- Attendance
- Psychomotor
- Affective Assessment
- Teacher's Remark
- Principal's Remark (if available)

Preview should be read-only.

Step 10 — Submit for Approval

Teacher clicks:

Submit for Approval

The class status changes to:

Pending School Admin Approval

Once submitted:

- Subject marks remain locked.
- Attendance is locked.
- Traits are locked.
- Teacher remarks are locked.

Editing becomes available again only if the School Admin returns the report card for correction.

Additional Recommendation 1 — Completion Dashboard

Before the teacher submits the class, display a completion summary.

Example:

Basic 1

Students: 23/23 ✓

Subjects Completed:

English ✓

Mathematics ✓

Basic Science ✓

Social Studies ✓

Attendance ✓

Psychomotor ✓

Teacher Remarks ✓

Ready for Submission ✓

If anything is incomplete:

Mathematics

17 of 23 students completed

or

Attendance

3 students missing

The teacher immediately knows what remains to be completed.

Additional Recommendation 2 — Submission Readiness Check

Do not allow submission until:

- Every required subject has been completed.
- Attendance has been entered for every student.

- Psychomotor and affective assessments are complete.
- Every student has a teacher's remark.

Display a clear message explaining what is still missing instead of allowing an incomplete submission.

Additional Recommendation 3 — Progress Indicators

Add progress indicators throughout the workflow.

Example:

Academic Scores

Attendance

Psychomotor

Remarks

This gives teachers immediate feedback on their progress.

Additional Recommendation 4 — Audit Trail

For every save, record:

- User
- Date
- Time

- Action

Example:

Last Saved By:
Mrs. Grace Johnson

22 July 2026
10:42 AM

This improves accountability and simplifies troubleshooting.

Recommended Architecture

Separate responsibilities into dedicated modules:

Student Marks Module

Responsible only for:

- Subject marks
- Continuous assessment
- Examination scores
- Score calculations

Prepare Report Card Module

Responsible only for:

- Attendance
- Psychomotor
- Affective assessment
- Teacher remarks
- Report card preview
- Submission workflow

These modules should communicate through shared academic records but remain independently maintainable.

Acceptance Criteria

This feature is complete when:

- The **Prepare Report Card** sidebar is available only to Class Teachers.
- Only assigned classes are displayed.
- The active Session and Term load automatically.
- Students are listed alphabetically with S/N values.
- Subject scores are displayed in read-only mode.
- Attendance validation works correctly.
- Psychomotor and affective assessments load dynamically from the School Admin configuration.
- Teacher remarks can be entered or edited.
- Progress is saved automatically and manually.
- A completion dashboard identifies missing items before submission.
- Submission is blocked until all required information is complete.
- A report card preview is generated using the selected school template.
- Completed report cards can be submitted to the School Admin for review.
- All actions are recorded in an audit trail.
- The feature is implemented without introducing regressions into the Teacher Dashboard or School Admin Dashboard.
